

API Specification

Document Information

Project: Blogging System API

Version: 1.0

Introduction

This document defines every REST endpoint exposed by the Blogging System API.

The API follows REST principles and exchanges data using JSON.

Base Route

```
/api
```

Standard Response Format

Success Response

```
{
  "success": true,
  "message": "Operation completed successfully.",
  "data": {}
}
```

Error Response

```
{
  "success": false,
  "message": "An error occurred.",
  "errors": [
    "Validation message"
  ]
}
```

```
}  
]
```

Authentication Endpoints

Register User

Method

```
POST /api/auth/register
```

Authentication Required

No

```
{
  "currentPassword": "OldPassword@123",
  "newPassword": "NewPassword@123"
}
```

Success

- 200 OK

Posts

Get All Published Posts

```
GET /api/posts
```

Authentication Required

No

Returns all published posts ordered by newest first.

Get Post By Id

```
GET /api/posts/{id}
```

Authentication Required

No

Returns a single published post.

Search Posts

```
GET /api/posts/search?title=ASP.NET
```

or

```
GET /api/posts/search?author=John
```

Authentication Required

No

Create Post

`POST /api/posts`

Authentication Required

Administrator

Request

```
{
  "title": "...",
  "summary": "...",
  "content": "...",
  "status": "Draft"
}
```

Returns

201 Created

Update Post

`PUT /api/posts/{id}`

Authentication Required

Administrator

Delete Post

`DELETE /api/posts/{id}`

Authentication Required

Administrator

Returns

204 No Content

Publish Draft

```
PATCH /api/posts/{id}/publish
```

Authentication Required

Administrator
